

BASIC CONCEPTS OF CHEMISTRY

Chapter 18

Biochemistry

Objectives:

- * Describe the different types of lipids, their common properties, and their major uses or functions
- * Describe the different types of carbohydrates, their common properties, and their major uses or functions
- * Describe how the different types of amino acids can create the four structural layers of protein
- * Describe the effects of conditions on enzymes and how they function
- * Describe how the attractions between base pairs in DNA and RNA lead to replication and transcription
